APPENDIX A PARKING SURVEY DATA

1 INTRODUCTION

APPOINTMENT

O'Connor Sutton Cronin have been appointed as the engineering team member within the integrated design team led by The Paul Hogarth Company to prepare a Part 8 application for upgrades to the public realm landscape within the town of Kilcullen, County Kildare.

PURPOSE OF THE REPORT

This report has been written to accompany the Part 8 Planning Application for this scheme. The report seeks to address the design considerations of the scheme associated with:

- Parking rates in the study area;

The purpose of this report is to interpret the data obtained from various studies and base data collection (including traffic surveys, as built information, design proposals) and analyse the potential impacts of the scheme on the town of Kilcullen.

STUDY AREA

The study area for the public realm upgrade is shown in the figure below.

Figure 1: Study Area

2 ATC SURVEYS

DATA COLLECTION AND SURVEY DESCRIPTION

OCSC managed a procurement process for the selection of a competent traffic surveyor to be engaged by KCC to carry out the survey and data collection information required.

As a result of the competitive process, Idaso Ltd was engaged to carry out traffic counts in the town to obtain data on the traffic volumes, speeds, and parking space utilisation. This data has been used to inform the design development and in the preparation of the Part 8 application. The objectives of the traffic survey were to obtain accurate data on:

- The traffic volumes within the study area, to allow OCSC to assess the effect of the design decisions on the capacity of the road network within the study area.
- The speed of vehicles using these roads, to allow the designer's take appropriate actions to ensure that the designed layout takes account of the actual speed of vehicles in the area and, if appropriate, seek to modulate the speed of users through design.
- The parking usage statistics, to ensure that the volume of parking available in the area is appropriate for the current utilisation, while also providing a high-quality urban public realm design.

Automated Traffic Counters (ATC) were set up at three strategic locations within the study area to obtain this data. The locations of these ATCs are shown in Figure 1 overleaf.

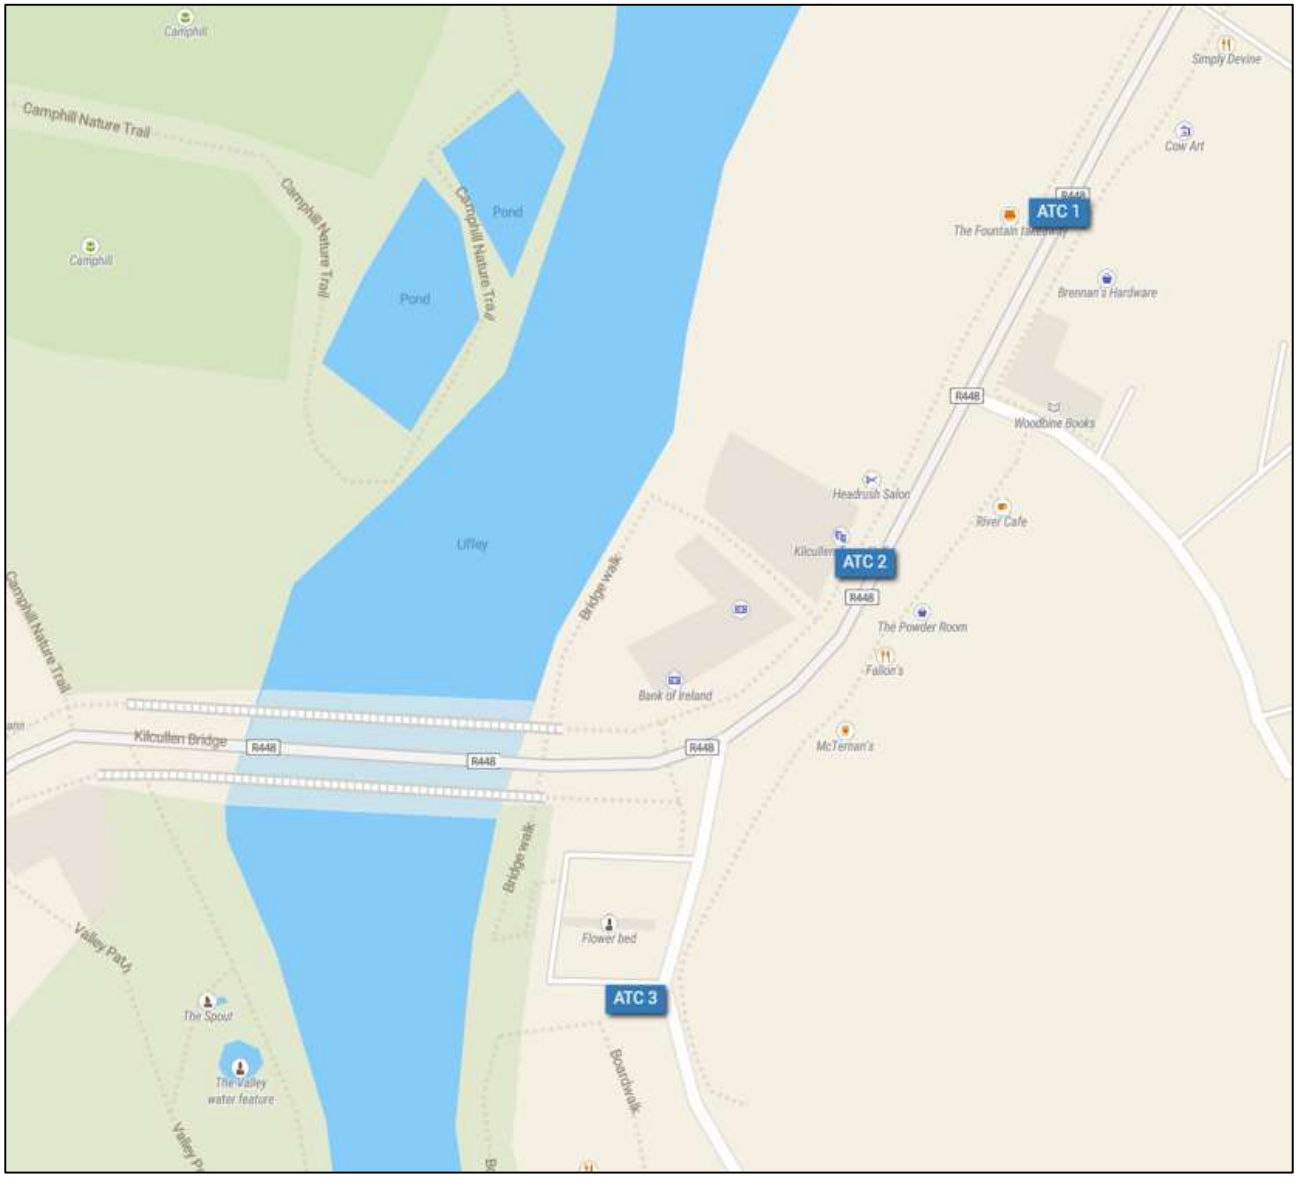

Figure 2: ATC Locations

SURVEY RESULTS

ATC surveys were carried out at these three locations in Kilcullen over 7 days. The ATCs record the total number of vehicles passing each survey point in both directions, broken down into 15 minute periods. The counters also distinguish between the various vehicle types e.g. cars, busses, light goods vehicles etc.

The total 7-day traffic volumes at each location are as below in Table 1. Note the counts are in vehicle numbers. Below is a basic context of each of the traffic count locations and an overview of the counts at each location.

ATC 1: This ATC is located in Kilcullen on the R448 approximately 140m north from Kilcullen Bridge, outside The Fountain Take Away. The road at this location is straight and approximately 7.3m in width with footpaths and buildings on either side.

ATC 2: This ATC is in the centre of Kilcullen, on the R448 opposite the Town Hall, approximately 65m north from the Kilcullen Bridge. The road is approximately 8.5m wide with on-street parking to the west and an adjacent parking bay to the east. The carriageway straightens up here after leaving the bridge

ATC 3: This ATC is located to the southeast of Kilcullen Bridge, opposite The Square. The carriageway at this location is approximately 5.5m with a footpath on both sides and is on a bend in the road approaching the junction with the R448. This road serves The Square and the housing estate to the east, thus seeing much lower daily counts.

ATC Number	Average Daily Totals	
	Northbound	Southbound
ATC 1	4373	3777
ATC 2	4487	3627
ATC 3	333	334

Table 1: ATC Daily Total Counts

The ATC figures show that on weekdays, the Northbound peak hour is 06:00-07:00 and the Southbound is 19:00. This illustrates that many people are commuting to work via this route.

The survey results also show that the percentage of Heavy Goods Vehicles (HGVs) along this route was relatively low at 3.34% of total vehicles.

3 PARKING SURVEY

DEFINITION OF THE STUDY AREA

A parking survey was carried out for the subject area. The methodology of the survey was to check the occupancy of each and every car parking space in the study area every 15 minutes from 07:00 until 19:00 on a weekday and on a Saturday.

In this survey, counts were carried out on both a weekday (Wednesday) and a Saturday to get an accurate representation of the usage. Both the number of spaces occupied, and the duration of stay were measured. The area that was monitored is shown below in Figure 3.

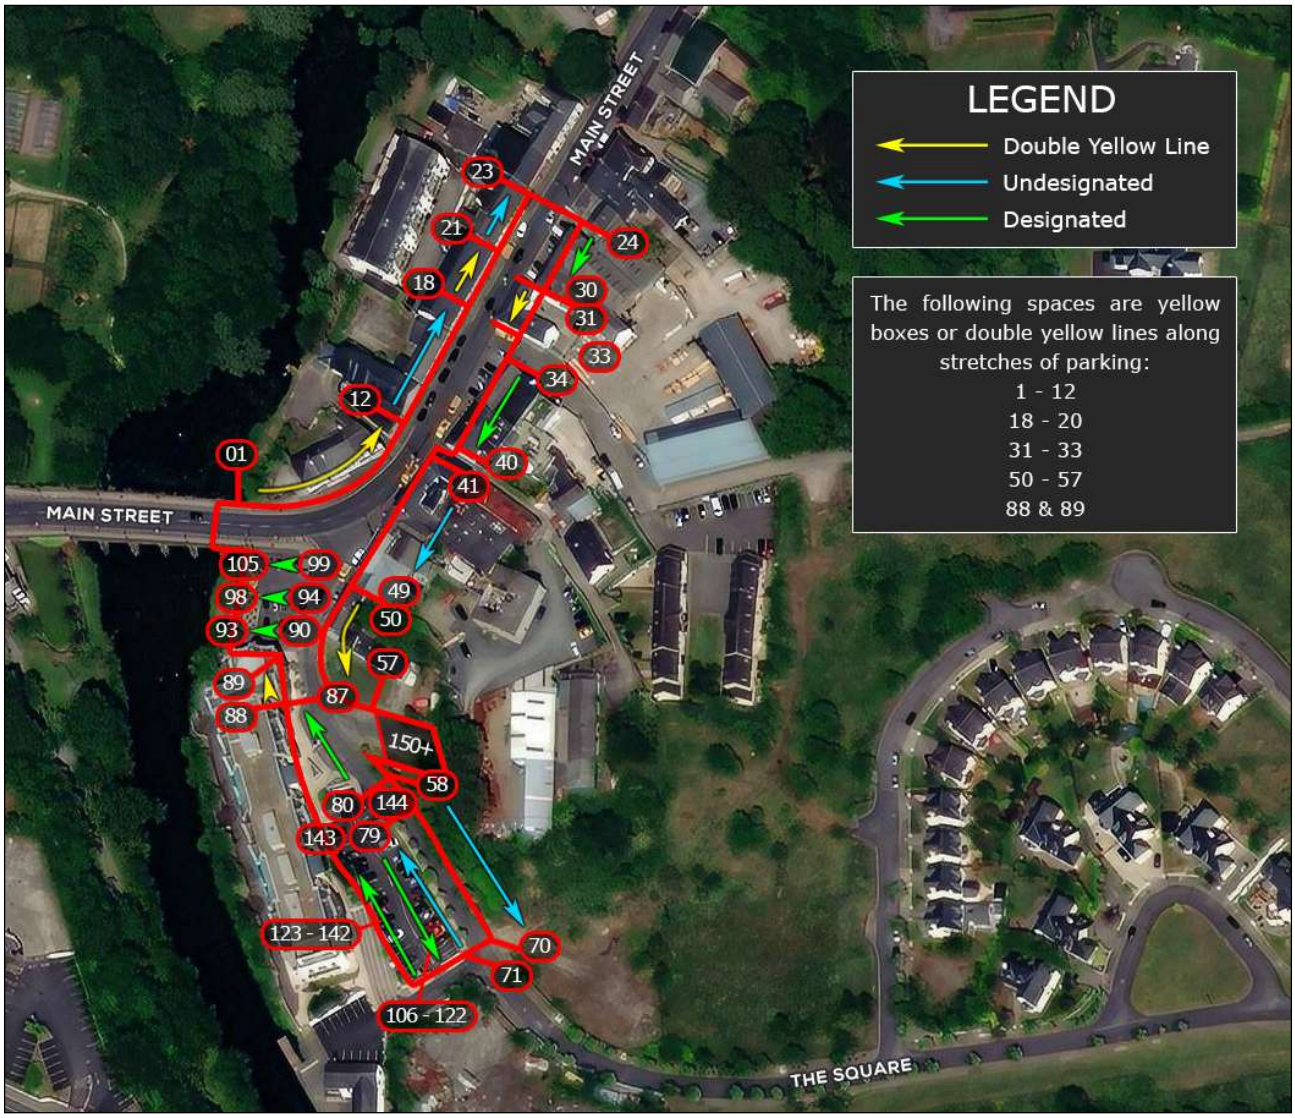

Figure 3: Parking Survey Areas

PARKING PATTERNS

All of the parking within the survey area can be used free of charge with no maximum stay durations applicable currently.

"Undesignated spaces" in Figure 3 denote spaces that haven't been lined out by painted road markings. The surveyors counted cars parked legally and illegally, i.e. on double yellow lines. It should also be noted that the spaces in Figure 3 marked "150+" are on a private access, however, some public vehicles did utilise this aera, therefore these illegal spaces still indicate demand for parking.

The assessed current legal parking total within the study area is 92 no. spaces. It is noted that there was a substantial usage of the loading bay outside the Provencal Office at the Square. This loading bay held 8 no. vehicles, and it is proposed that these are included for the purposes of the assessment due to the custom and practice of their usage. This results in a current total parking availability within the study area of 100 no. spaces.

It should be noted that at various times during the survey, vehicles were parked in 118 different locations within the survey area. Some of these locations were deemed not to be appropriate for parking. Thus, in order to assess the legal spaces in the current layout, 100 no. spaces is deemed a more conservative, accurate and robust measure of the number of spaces available to the public in the study area.

The peak occupancy rate (i.e. the maximum number of spaces occupied at any given time) for the different days is shown in Figure 4 & Figure 5. A detailed breakdown of the number of cars parked during a given 15-minute period, and the statistics on the duration each space is occupied by the same car is provided in Appendix A. This information indicates which areas are being used for long term parking – possibly residents or those working in the town, or short-term parking, such as for retail purposes.

PARKING RATES

Kilcullen Study Area: Total number of parking spaces: 100.

14/05/2019 – Weekday Survey: The minimum number of spaces occupied during the survey was 36. The maximum number of spaces occupied was 69 no. spaces at 12:15 PM.

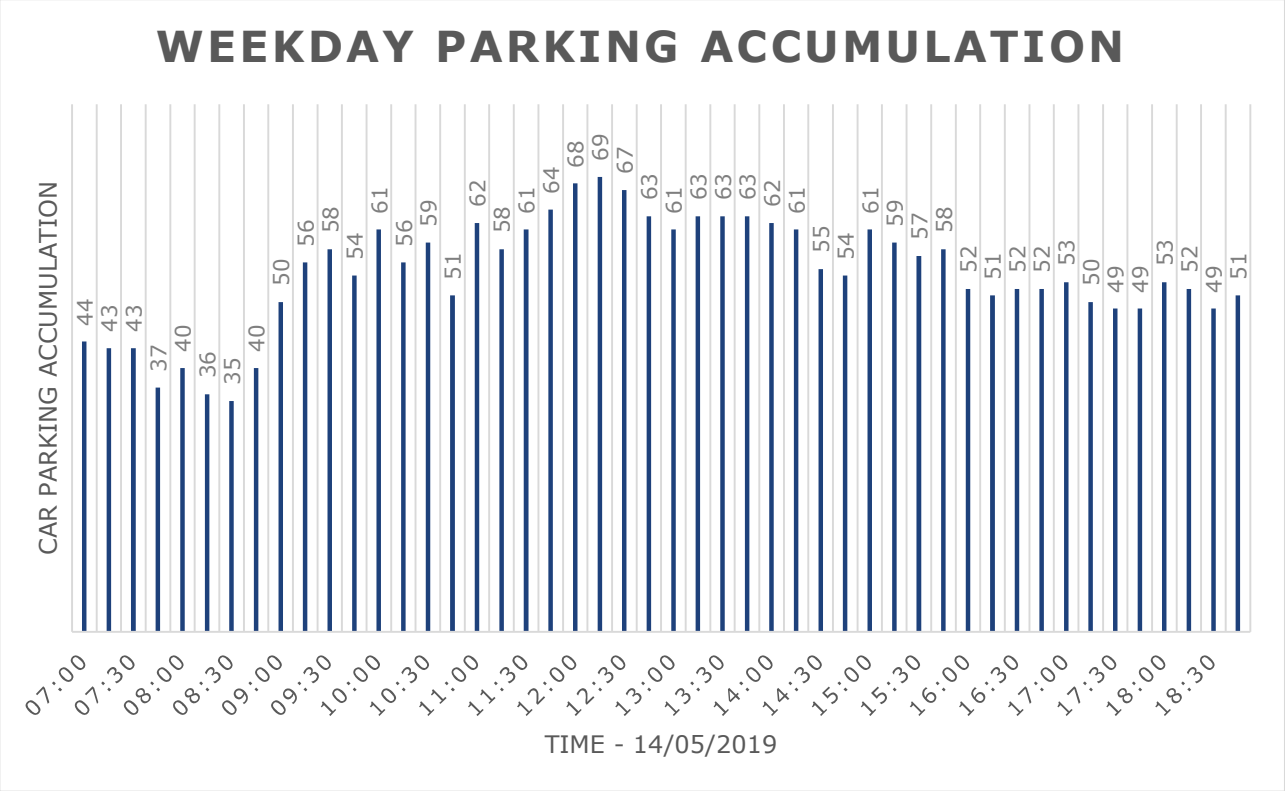

Figure 4: Weekday Parking Accumulation

Analysis of the length of stay shows that 65.2% of visitors were parked for one hour or less. 18.5% stayed for between one and two hours. The remaining 16.3% stayed for between two hours and the full duration of the survey.

In areas with a policy to encourage ease of access to retail facilities, which by their nature have short time duration visits, good planning dictates limiting the maximum duration of stay in parking spaces to 2 hours. Should a similar measure be incorporated into the town of Kilcullen, this would increase the availability of parking by a further 18 no. spaces within the study area at peak parking timeslots.

Saturday 18/05/2019: The minimum number of spaces occupied during the survey was 47. The maximum number of spaces occupied was 86 no. spaces at 17:00 and 19:00.

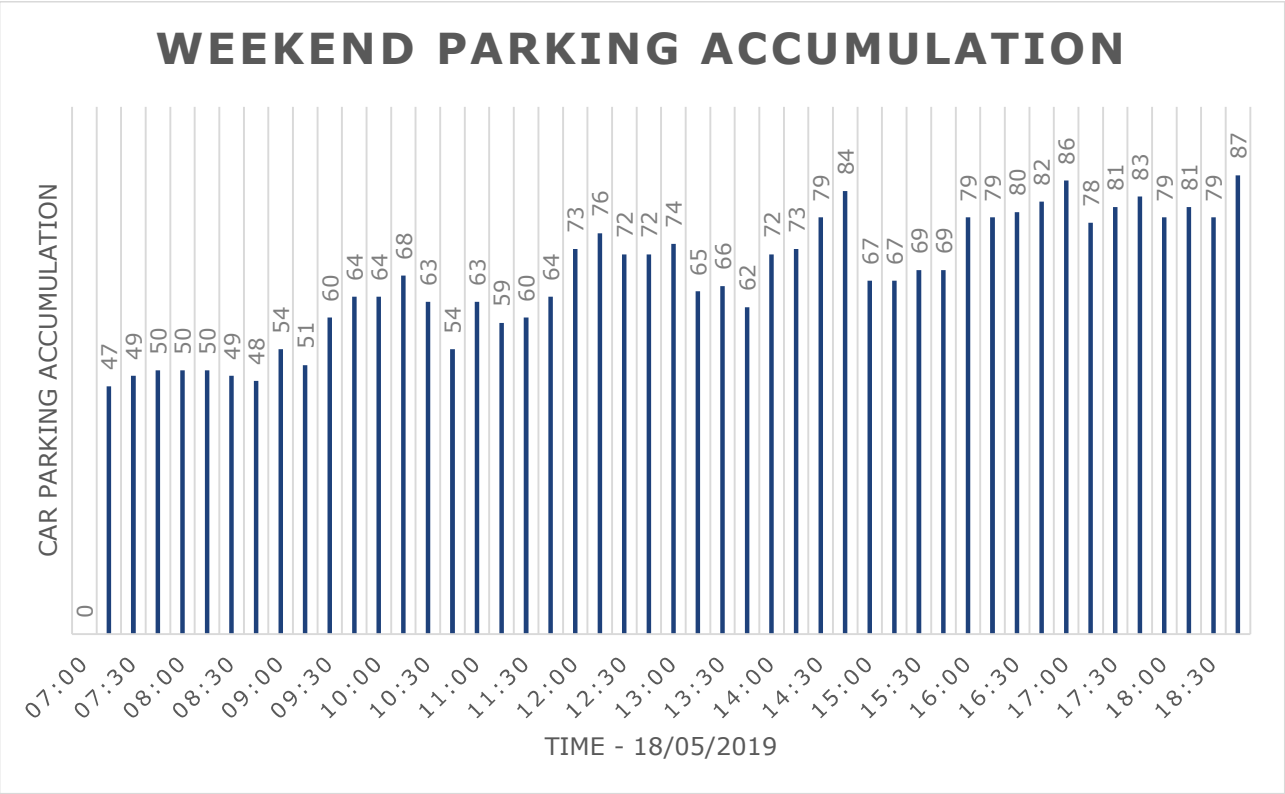

Figure 5: Weekend Parking Accumulation

Analysis of the length of stay showed that 47.8% of visitors were parked for one hour or less. 20.6% stayed for between one and two hours. The remaining 31.7% stayed for between two hours and the full duration of the survey.

As noted above it would be of concern on a peak shopping day that 31.7% of the parked vehicles were there for over 2 hours. Should a measure to curtail the parking duration to 2 hours be incorporated into the town of Kilcullen this would increase the availability of parking by up to 25 no. spaces at peak parking time.

PARKING DURATION

Given the results of the parking survey are showing significant numbers of cars parked in the study area, it was deemed of interest to carry out some rudimentary assessment of the duration that cars are parked.

It is noted that on the weekday, 17 of the vehicles were parked in the study area for over 5 hours. On the Saturday this figure was 16 vehicles. There is also a significant amount of dwell time in excess of two hours. In general, two hours is accepted as a normal maximum dwell time for a casual shopping area such as a town centre.

In the table below, the number of cars parked in excess of two hours is shown as a percentage of the total number of cars park at that time. The shown data is for peak parking periods only. These periods were found to be 16:00 to 19:00 on Saturday, and 11:30 to 14:30 on the weekday.

Time	Weekday		Weekend	
	Total Parked Vehicles in time period	Percent Of Vehicles Parked >2h	Total Parked Vehicles in time period	Percent Of Vehicles Parked >2h
16:00	61	49%	79	39%
16:15	64	48%	79	41%
16:30	68	46%	80	43%
16:45	69	44%	82	48%
17:00	67	40%	86	49%
17:15	63	49%	78	49%
17:30	61	44%	81	49%
17:45	63	42%	83	70%
18:00	63	46%	79	67%
18:15	63	48%	81	67%
18:30	62	48%	79	66%
18:45	61	49%	87	64%
19:00	55	42%	86	58%

Table 2: Cars Parked > 2h as Percentage of Total Cars Parked

From the above table, it is evident that there is a tendency for the spaces in this study area to be occupied for prolonged periods of time.

Based on the above data it would seem that the town parking arrangements in this part of Kilcullen would benefit from regulation. This would likely free up parking and be beneficial for retailers.

SCHEME PARKING PROVISION

The proposed scheme will impact some of the existing available parking. These include alterations to the parking along Main Street, as well as the removal of parking in The Square.

The width of Main Street will be reduced, which means that the undesignated spaces will not be usable. In terms of designated spaces, the perpendicular parking spaces will be reconfigured to parallel via parking bays. While this will lead to a reduction in available parking, it will also lead to an improvement in safety. The parallel configuration means vehicles can pull in and out of the spaces as required, without the need to reverse into the road, as is the case with perpendicular spaces. This configuration means that the combined undesignated (17 no.) and designated (15 no.) spaces along Main Street will be reduced from the current 32 to 7 designated spaces.

Furthermore, the current parking spaces in The Square will be removed as this space will be reconfigured for commercial use. This means that a further 15 designated spaces will be removed.

This means that the current 100 available parking spaces within the study area will be reduced to 60 spaces. 17 of the reduced spaces are undesignated, which means vehicles are parking illegally.

This is slightly below the maximum weekday occupancy of 69 spaces and below the maximum weekend occupancy of 86 spaces. However, an analysis of the parking accumulation survey shows that during times where parking demand would exceed provision, a significant proportion of spaces had been occupied for greater than 2 hours. This is detailed in the previous section of this report. Furthermore, planning permission has recently been granted under PL 21/1267 (to alter and extend existing car park. The proposed works comprise of the following: a) Construction of new access road onto Riverside Road. b) New car parking layout to include provision of 44 parking spaces. c) One number pay as you go electric car charging point. d) Resurfacing of existing access lane. e) Revised boundary treatments. f) Bicycle Parking Stand along with Site infrastructure works, landscaping and all associated site development and facilitating works at the rear of Fallons Bar & Restaurant, leading onto Riverside Road).

The layout of PL 21/1267 is shown in the image overleaf.

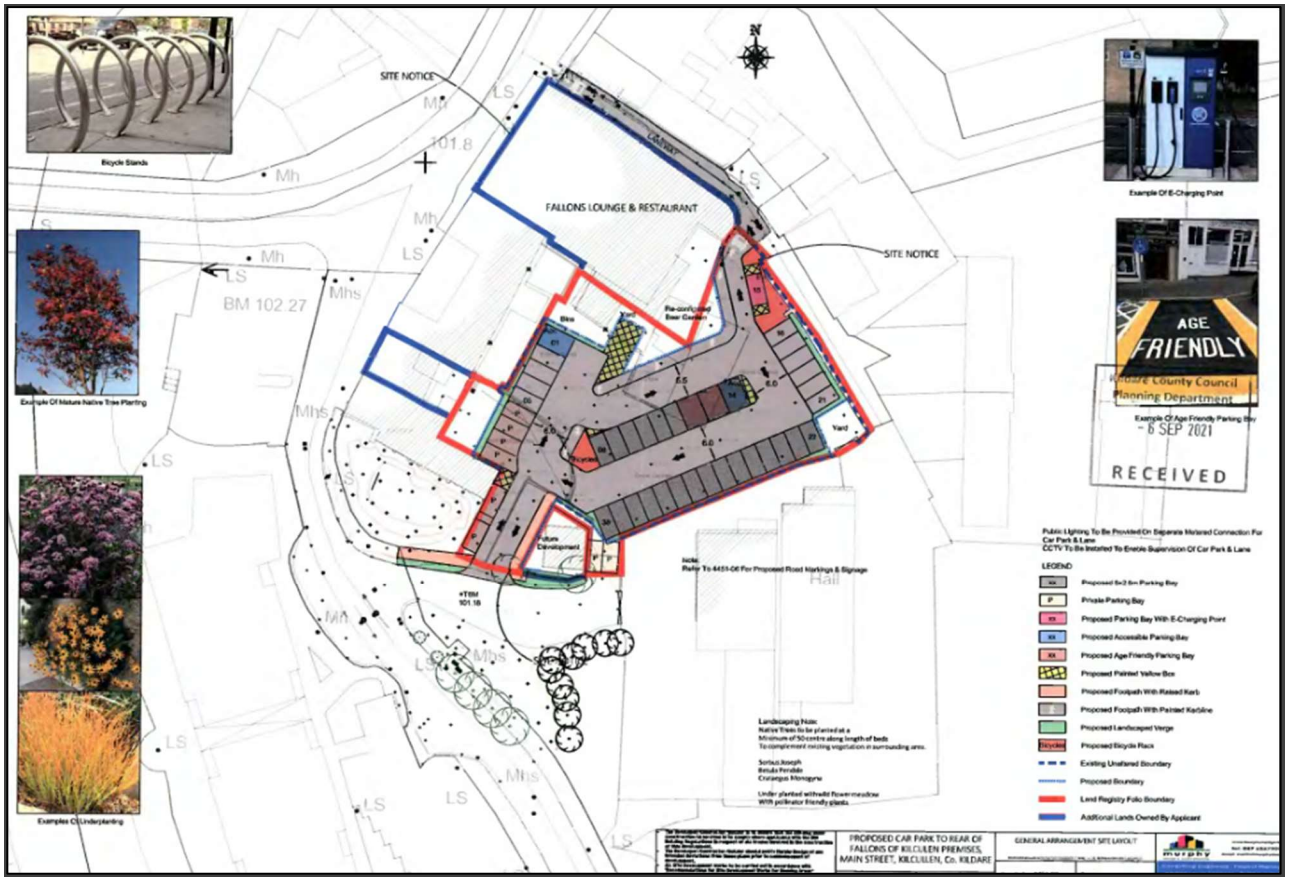

Figure 6: Fallon's Car Park Layout

The additional parking provided at Fallon's car park should compensate for lost car parking spaces on Mark Square. In addition to this, should the parking durations be addressed, the total parking provision for the study area is deemed adequate. Furthermore, the increased safety in the area due to these reconfigurations will improve accessibility for pedestrians and cyclists, which could lead to a reduction in car parking demand.

The proposed layout for this Public Realm Upgrade project is shown overleaf.
