

Alignment Segment AB5

Where tree are taller and a less open aspect presents itself in the landscape the standard signage option for 'Quiet Roads' works very well in specific settings as is the case along this segment.

Examples below from Long Lane Yorkshire after several successful years. The taller hedgerows and trees along this section allow the signage to sit sympathetically in its rural setting.

Any hedge laying required along this segment to be carried out in traditional manner with binding considered for the top unless another local style can be discerned. Trees to be maintained with a clear stem over the hedge.
